In the claims

1. (Currently Amended) A method for accessing data comprising:  
configuring data at least partially obtained from an enterprise resource planning system;  
storing said data;  
sending ~~[[a]]~~ one or more generic access instructions from a first server;  
identifying said data to be accessed in response to the generic access instruction; and  
supplying from a ~~second server, comprising a printing apparatus with having~~ an  
embedded web server, a different one of the at least one generic access instructions operable for  
providing a print dialog box with selectable options for printing said data with the printing  
apparatus.
2. (Currently Amended) The method of claim 1, further comprising:  
receiving said generic access instructions; and  
accessing said data.
3. (Original) The method of claim 1, wherein said storing said data comprises  
storing a portion of said data in an independent image format.
4. (Currently Amended) The method of claim 1, further comprising:  
generating a generic access request in response to said generic access instructions.
5. (Original) The method of claim 1, wherein said identifying comprises associating  
said data with a computer user.

6. (Previously Presented) The method of claim 1, wherein said identifying comprises utilizing server side technology.

7. (Original) The method of claim 1, wherein said identifying comprises utilizing client side technology.

8. (Currently Amended) A method for outputting data comprising:  
providing a client having capability to execute a web browser[[]];  
providing an extension;  
configuring data partially obtained from an enterprise resource planning system;  
identifying said data to be accessed in response to a generic access instruction;  
communicating a first web content to said client containing a generic access instruction causing a portion of said data to be accessed;  
communicating a second web content from a printer incorporating a web server to said client providing capability for outputting said data, the capability for outputting said data comprising a print dialog box including at least one selectable option; and  
outputting said data.

9. (Original) The method of claim 8, wherein said identifying comprises associating said data with a computer user.

10. (Original) The method of claim 8, wherein said identifying comprises utilizing client side technology.

11. (Original) The method of claim 8, wherein said identifying comprises utilizing server side technology.

12. (Original) The method of claim 8, further comprising tailoring said extension to characteristics of said client.

13. (Original) The method of claim 8, wherein said outputting said data includes outputting additional data.

14. (Original) The method of claim 8, wherein said outputting said data includes outputting to multiple devices.

15. (Original) The method of claim 8, wherein said generic access instruction causes a portion of said data to be accessed causes additional data to be accessed.

16. (Original) The method of claim 8, wherein a portion of said communicating said first web content utilizes a firewall.

17. (Original) The method of claim 8, wherein a portion of said communicating said first web content utilizes the Internet.

18. (Original) The method of claim 8, further comprising storing a portion of said data in an independent image format.

19. (Previously Presented) A system for accessing data comprising:  
an apparatus for obtaining data from an enterprise resource planning ("ERP") system;  
an apparatus for implementing a generic access instruction;  
an apparatus configured to communicate said generic access instruction;

an extension configured to respond to said generic access instruction;  
a printer with an embedded web server; and  
at least one other generic access instruction configured to generate a print dialog box including a print preview option for the data.

20. (Original) The system of claim 19, wherein said generic access instruction causes said extension to access said data.

21. (Original) The system of claim 19, wherein said data represents an image having an independent format.

22. (Original) The system of claim 19, wherein said generic access instruction causes a generic access request.

23. (Original) The system of claim 19, wherein said apparatus for implementing a generic access instruction includes communicating using the Internet.

24. (Original) The system of claim 19, wherein said generic access instruction includes instruction communicated in hyper text transfer protocol.

25. (Previously Presented) The system of claim 22, wherein said generic access request includes requests communicated by way of the Internet.

26. (Previously Presented) A system for sharing data comprising:  
an apparatus for partially obtaining data from an enterprise resource planning system;  
an apparatus configured to provide a generic access instruction;

an extension configured to respond to the generic access instruction and for communicating with web content containing a second generic access instruction configured for causing display of a print dialog box with a plurality of selectable options; and  
a second server comprising a printing device including a web server and operable for communicating the web content.

27. (Original) The system of claim 26, wherein said generic access instruction causes said extension to access said data.

28. (Original) The system of claim 26, wherein said data from an enterprise resource planning system includes an image having an independent format.

29. (Original) The system of claim 26, wherein said extension causes said data to be output using said output device.

30. (Original) The system of claim 29, wherein said data output includes data output using the Internet.

31. (Original) The system of claim 26, wherein said extension includes executing a browser.

32. (Original) The system of claim 26, wherein said extension includes the characteristics of said client.

33. (Original) The system of claim 26, wherein said data is associated with a user of said client.
